SUMMARY

Senior UX designer with 4+ years in programmatic ad tech (DV+, CTV streaming). Promoted to UX Designer II at Magnite in 2026 for leading AI workflow adoption across a 50-person product org. Co-owner of Magnite's design system. M.S. Information Experience Design, Pratt Institute.

SKILLS

- **Domain:** Programmatic advertising, DV+, CTV streaming, B2B SaaS, ad tech, publisher tools
- **AI & Automation:** Claude Code, Figma Make, Lovable, Builder.io, Cursor, MCP, Pendo
- **UX:** Product design, design systems, information architecture, interaction design, usability testing, accessibility, prototyping, A/B testing
- **Design Tools:** Figma, Adobe Illustrator, Adobe Photoshop, Procreate
- **Collaboration:** Miro, FigJam, Mural, Jira, Confluence
- **Methods:** Agile, cross-functional collaboration, stakeholder alignment, QA review, design system governance

EXPERIENCE

- **Magnite** Mountain View, CA
UX Designer II *January 2026 – Present*
 - **AI Tooling Strategy:** Led AI tool adoption for the UX team — evaluated Lovable, Builder.io, Figma Make, UX Pilot, and Claude Code against time-to-output and prototyping fidelity; standardized on Figma Make and Claude Code with Figma MCP, securing expedited security approval within one week.
 - **Enablement:** Authored Confluence cheatsheets and ran setup sessions to onboard non-engineering users; presented a custom design-library based AI prototype skill to **50+ product team members** in a cross-org session.
 - **Claude Skills:** Built custom Claude skills to eliminate repetitive design tasks, including a bulk Figma edit skill and a PRD-to-ideation skill that generates design concepts directly in Figma using the in-house component library.
 - **Atlassian MCP Pipeline:** Created an automated pipeline converting raw bug report emails (code snippets, cURL logs) into structured Jira tickets routed to the correct engineering team, saving **2–3 hours** of manual triage per release cycle.
 - **PM Self-Serve Tool:** Deployed a Claude skill enabling **~60 PMs** across DV+ and Streaming to make UI updates independently using the design library, eliminating a chronic backlog of deprioritized design tickets; built an integrated audit log for UX compliance review.
 - **Cross-Functional Leadership:** Partners with **10 PMs** and **50 engineers** across two products, owning 5–10 features at any given time as one of four designers covering Magnite's full product portfolio.

- UX Designer* *June 2022 – December 2025*
 - **DV+ Marketplace:** Drove a **114% increase in ad spend** by leading end-to-end UX for DV+ Marketplace Deal Management — a net-new UI for curated marketplace creation, editing, and listing across 5 phases and 3 iteration cycles (previously done in code by engineers).
 - **Revenue Growth:** Designed the Demand Manager Wrapper Automation tool, resulting in a **4% revenue increase**; led UX for a Blocklist Management app giving DV+ publishers granular control over advertiser, DSP, and content inclusions or exclusions with bulk upload and revenue-impact reporting.
 - **Marketplace Admin:** Designed the Marketplace Admin App for external publisher self-service: marketplace creation, user permission management, and inventory rule configuration — removing engineering dependency for day-to-day operations.
 - **Political Preview & Live Events:** Designed the Political Preview tool to unblock political ad revenue during the 2024 US election cycle, and the Live Events ad serving experience for Magnite Streaming, enabling CTV publishers to monetize live event inventory (Olympics, cricket, boxing).
 - **Design System:** Co-owned Magnite's design system as one of two responsible designers — built half of all custom Figma components (modals, side panels, nav bars) and contributed directly to Storybook component code using AI-assisted development, **reducing dev time by 20%** across DV+, Streaming, and ClearLine.

- FCB Health**
Product Designer I
 - **Scalable Solutions:** Crafted accessible, user-centric designs for desktop and mobile platforms, currently used by **50,000+ users** across healthcare applications.
 - **Iterative Design:** Refined design concepts for healthcare apps, websites, and interactive visual aids, ensuring they met the diverse needs of healthcare users.
 - **Cross-Functional Collaboration:** Partnered with UX Architects, Copywriters, Developers, and stakeholders to ensure solutions met business goals and adhered to stringent health industry regulations.
 - Rocket Software**
UX Designer and Researcher
 - **Collaborative Design:** Led design of the MultiValue Performance Experience Dashboard for **8,000+ users**, collaborating with **20+ engineers and PMs** in an Agile environment.
 - **UX Education:** Led **3 “Lunch and Learn”** sessions for **50+ team members**, including executives, to foster a user-centric culture through best UX practices.
